WHO WE ARE

Renvolt Energy Solutions Private Limited, established in 2020 as a start-up incubated by a team of talented engineering graduates from MBITS Engineering College with faculty equity, has rapidly emerged as a prominent player in the renewable energy and Electric Vehicle (EV) sector. Originating from electric vehicle projects, the company diversified its focus to become a leading solar Engineering, Procurement, and Construction (EPC) company in Kerala. Achieving recognition as an approved vendor for Central Government MNRE solar projects solidified Renvolt's position in the industry.

Specialising in E-Mobility solutions, the company has undertaken home charger installations for esteemed automobile brands such as Tata Motors, Mercedes Benz, BMW, AUDI, BYD, MG, and Hyundai.

Renvolt's commitment to sustainable energy is evident through its emphasis on DC fast charging stations and solar-powered stations. The company has garnered noteworthy accolades, including a patent for developing an Energy Efficient Retrofitting Kit for Converting Combustible Vehicle to Solar Powered EVs awarded by the Government of India, acknowledgement from the ISRO Chairman for EV projects, and recognition from the Kerala State Regulatory Commission as the most successful start-up in the Solar and EV charging station sector. Renvolt further strengthens its clean-energy portfolio through Industrial Battery Energy Storage System (BESS) solutions. These milestones mark Renvolt's impactful journey in shaping the future of renewable energy and electric mobility.
